The invention relates to human immune system-related protoin and their CC PAA. Human immune-system related precent and ENA are useful for preventing, treating or amelicating a medical condition in a mammalian or subject, for diagnosing preventing or freating liminate cycle. According to disorders, autoimmune disorders (rheumatoid arthritis), inflammatory disorders, autoimmune disorders (rheumatoid arthritis), inflammatory disorders, immune complex failed arthritis), complement afficiency. Inflammatory disorders, immune complex diseases, neoplartic disorders (callergies), infectious diseases (e.g., viral hepatitis), complement afficiency. hyperproliferative disorders (Saucher's disease), disorders (cancer) hyperproliferative disorders (Saucher's disease), disorders (cardiovascular disorders (arrhythmias)) wound healing and epithelial or ell proliferation, endersine disorders (diabetes medition) and complement of the proliferation, endersing hair loss, skin aging due to combine, for maintain organs before transplantation, to treat weight disorders, to physical state, or as a feed additive or preservative. Immune cystem related CNA is useful in June therupy, for thousand June 1 mounts cystem related CNA is useful in June therupy, for thousand and in forensic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, immune system-related protein; allergy; rheumatoid arthritis; cancer; Gaucher's disease, viral hepathis, gene therapy, cytocratic; diabetes mellitus, arrhythmia; wound hating; ischaemic lesion; AIDS; Acquired Immune Deficiency Syndrome, virucide, hepatotropic, vasotropic; autoimmune disorder; inflammation, tardityasillar disorder; hair loss; wound healing, cell publiferation, skin aging; endocrine disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                Movel isolated immune system related polypoptide useful for treating rheumatoid arthritis, AIDS, allergy, cancer, Gaucher's disease, diabetes rellitus, arthythmia, would health, isohemic lesions and viral hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Page 300; 315pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            08-MAR-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 07-MAR 2001; 2001Wu-US07260

Novel nucleic acids and peptides derived from open reading frame useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 468 BP; 129 A, 101 C; 111 G; 126 T; 1 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   allergies, aplastic anaemia, burns, wounds, bone and cartilage damage nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurod-generative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellinus, hypertension, hyperbyroidism, inclessed ester stratege, systemic lup
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an OREX associated disorder. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunostimulant; cardiant; thromboly ic, coagulant; vasotropi antidiabetic; hypotensive; dermatological; immunosuppressive; antifiammatory; antibacterial; antivital; antifundal; antifundal; antificularity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      which represent the human OPFX open reading frames I to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 5; Page 600; 5507pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC anti-neoplastic agent. The method involves exposing cells to a chemical CC agent to be tested for anti-neoplastic activity, determining a change in CC expression of at least one gene (1) of a signature gene set, where (1) CC comprises a sequence (5) selected from 8447 sequences (given in ABL6664 to ABL70110), or is at least 95% identical to (5), where a change in CC expression is indicative of arti-neoplastic activity. (1) has cycentatic CC activity and can be used in gene therapy. MI can be used for screening CC an anti-neoplastic agent, and tan be used fire product which is the data collected with respect to the anti-neoplastic agent as a collected with respect to the anti-neoplastic agent as colon, breast, stomest, the chemical CC excuture and/or properties of the agent. MI can be used in the CC treatment of cancer such as colon, breast, stomach, lung, thyroid, CC adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcer, neuro-medical cancer, carcinoma and wilm's rimony.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ü
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    medical conditions e.g. by protein or gene therapy. The genes are consisted from a range of human tissues disclosed in the specification. The nucleic arids, proteins, antibodies and (antigonists are useful CC in the diagnosis, treatment and prevention of (a) cancer, e.g. breast cC and cvirial langer in the first langers of the attack proteins, antibodies and cvirial langer, but the interstinal liver, ling, or unogenist), or (b) immune disciples a patchished a langers, allegges, auclimnance themselves, because, the among the selections of disease, multiple sclerosis, the unatributed arthritis and ulterative of livers, multiple sclerosis, the unatributed arthritis and ulterative of uniterpot, and tealing, (c) neutrological diseases e.g. derectial ancord and parasitic infections

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly or from WIPO at ftp wipo int/published_pot_sequences.

(HUMA-) HUMAN GENOME

Barash SC, Ruben SM;

WFI; 2001 483426/52.

metastasis Earlie acids enoughing huran immam/hemater into antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and

Disclosure; SEQ ID NO 39360, 3671pp + Sequence Listing; English

AAK54951 to AAK64702 encode the human immuno/haematopoietic antigen (I) arino acid sequences given in AAM82170 to AAK94921 (I) have sylvostatic activity, and can be used in grow therapy and varying pulsatic interests and polymorles rides may be used in the prevention, diagnosis and treatment of dispases associated with inappropriate (I) expression. For example, they may be used to treat discribers associated with decreased expression by rectifying mutations or delections in a patient's genome that affect the activity of (I) by expressing leading the proteins or recomplement the patients own production of (I) Additionally, (I) polymucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polymucleotides may be used to proteins and treat immune/haemacopoletic related discusses, uspecially cancers and cancer matastases of happatoprintic during decides. AAK64703 to AAK87694 represent human immune/haematopoletic antigen genomic sequences from the present invention,  $N_0 Y^2 4^3 2^3$ .  $N_0 Y^2 4^3 2^3$  and  $N_0 Y^3$ represent sequences used in the exemplification of the prosent invention ESTORMAN LIFE

Sequence 8387 BF, 2394 A; 1711 C, 1746 G, 2036 T; 0 other;

The method involves exposing cells to a chemical CC agent to be tested for unti-neoplastic activity, determining a change in CC expression of at least one gene (I) of a signature gene set, where (I) CC comprises a sequence (S) selected from 8447 sequences (given in ABL70110), or is at least 95% identical to (S), where a change in CC expression is indicative of anti-neoplastic activity. (I) has symmetric expression is indicative of anti-neoplastic activity. (I) has symmetric CC activity and can be used in gene therapy. MI can be used for screening CC an anti-neoplastic agent, and can be used for product which CC is the data collected with respect to the anti-neoplastic agent as a collected with respect to the anti-neoplastic agent which CC structure and/or properties of the agent. MI can be used in the CC structure and/or properties of the agent. MI can be used in the CC structure and/or properties of the agent. MI can be used in the CC structure and/or properties of the agent. MI can be used in the CC structure and/or properties of the agent. MI can be used in the CC accompageal, evarian, brance, prostate or pancipach, lung, thyroid, CC accompageal, carcinoma, clear cell cancer, infiltrating ductal cancer. Squameus cell carcinoma, neuroendocrine CC anciences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method (MI) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be rested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ARI/6164 to ARI/0101), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid,

Of The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical organization to be tested for anti-neoplastic activity, determining a change in organization of ar least are gene (I) if a signature years set, where (I) or comprises a sequence (S) selected from 8447 sequences (given in ABL6164 or comprises a sequence (S) selected from 8447 sequences (given in ABL6164 or comprises a sequence (S) selected from 8447 sequences (given in ABL6164 or or comprises in indicative of anti-neoplastic activity. (I) has cyrostatic compression is indicative of anti-neoplastic activity. (I) has cyrostatic compression is indicative of anti-neoplastic activity. (I) has cyrostatic continuity and can be used for producing a product which cois the dara or language for product which cois the dara or language for product which cois the dara or language for the chemical correspond to the dara is sufficient to convey the chemical correspond to the agent. M1 can be used in the corresponding of the agent as a solon, breast, stomach, lung, thyroid, co-sophageal, overiam, kidney, proseate or pancreatic cancer.

The description of cancer and convey the chemical concernation of cancer and convey the cancer and c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         02 00T 2000 2000US-237172E

The present sequence is one of a large number of 5° ESTs derived from mpNAs encoding secreted proteins. We OFF has yet been conclusively identified within the present sequence. The 5° ESTs were prepared from rotal human FNAs or polyA-FNAs derived from 10° different through EST sequences usually correspond mainly to the 3° untranclated region. The of the mRNA because they are often obtained from obligo-dT primed cDNA indicates. Such ESTs are not well suited for isolating cDNA organized.
                                                                                                                                                                                                                                                                                                                                               New nucleic acid that is a 5' expressed sequence tag (5' EST. for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 65608 BP, 15987 A, 16979 C, 16761 G, 15878 T; 3 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           REGULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         29-JUL-1999; 99JP-0248036

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc sequence and an oligonucleotide comprising a sequence complementary to a cc polynucleotide which comprises a 3'-end sequence complementary to a cc cligonucleotide which comprises a 3'-end sequence, where the combination of the S'-end sequence 23'-end sequence is subsected from those defined in the specification. The primers are useful for synthesising polynucleotides, cc particularly full-length cDMAs. The primers are also useful for the cdetection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDMAs. The primers allow obtaining of the full-length cDMAs. The primers allow obtaining of the full-length cDMAs are useful for the cc CMAs easily without any specialised methods. AMH93166 to AMH18678 and C AAB58893 represent human amino acid sequences, and AMH26C9 to AMH18622 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                     5

These can be used in the prevention and treatment of reproductive system disorders, the half sequence in the present sequence is a jen min sequence encoding a protein of the invention.

AAKS4951 to AAKS4702 eponds the human immune/haveatopoletic untigen (1) aming activity, and can be used in gene therapy and vaccine production. (1) have cytostatic activity, and can be used in gene therapy and vaccine production. (1) proteins and polynocheotides may be used in the prevention, diagnosis at treatment of diseases associated with inappropriate (1) expression. For example, they may be used to troat disorders associated with decreased expression by any ideality of (1) by expression in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polynomial control of the same production of the section of the section

AAY54951 TO AAY54702 encode the human immune/hasmatopoletic antigen (I) amino acid sequences given in AAM80170 to AAY91901 (I) have cytochastic activity, and can be used in game therapy and varcine production. (I) proteins and polynomial tides may be used in the prevention, diagnosis an iteatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disputers associated with decreased expression by rectifying matarities of deletions in a patient's genome that affect the activity of (I) by expressing inactive profession of supplement the patients own production of (I) Additionally, (I) polynomial contides may be used to produce the secreted (I), by inserting

(1) proteins and polymuclectides may be used to prevent, diagnose and treat immune/hasmatcpoletic-related diseases, especially cancers and manner merastases of hasmatcpoletic-derived cells. AAK64703 to AAK87694 represent human immune/hasmatcpoletic antigen genomic sequences from the present invention. AAK59992 to AAK59990 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                      Surplemme 111 BP; Ind A; Bo m; Ind G; 47 T; 0 other;
